NaNOcopy™

## Superior Copy Protection for the Digital Age

ORIGINAL

COUNTERFEIT

'Copy Evident' printing techiques typically use either small dots/big dots or varying line widths and angles to create a warning message on a copy. These techniques were acceptable years ago when scanning resolutions were low enough that copiers were easily defeated. Today present day counterfeiters would tell you that either of these techniques is easily defeated with any modern budget scanner.

Enter NaNOcopy™ ... *the pantograph for the digital age*. Rather than using simple dots or lines, it takes the copy protection to a new level. Desktop counterfeiters are currently unable to defeat the background's micro structures.. Not only is NaNOcopy™ superior in design, but it also allows the embedding of a secure code or algorithm for further verification. The NaNOcopy™ secure code can be customized according to each customer, including a job audit trail that effectively tracks print runs for higher security.
